

WATCHPAX 4 RACK MOUNTING KIT

WATCHPAX 4 media servers can be placed as standalone units or, if you have two units, installed in a 19-inch rack using the WATCHPAX 4 RACK MOUNTING KIT.

The rack kit is designed for two WATCHPAX 4 units, positioned side-by-side. It is not possible to install a single unit in a rack. The two units are connected with the metal discs in four places and attached to the rack with the help of brackets.

Contents

- 2 brackets, metal
- 4 discs, metal

Not included in the kit: A metal bar/shelf required to support the units in the rack. Hex key required for installation.

How to

Two WATCHPAX 4 units may be joined together and inserted into a 19-inch rack.

1 Using a hex key, remove both front bumpers and one rear bumper on each WATCHPAX 4 unit. Retain the screws. Save the bumpers in case you wish to re-mount them at a later date.

2 Place the two units side-by-side. Use the screws from the bumpers to join the two units by mounting the two discs on the top of the units, one screw in either unit.

3 Carefully turn the units over and mount the remaining two discs in the same way on the base of the units.

IMPORTANT Always mount all four discs to ensure the units are safely joined together.

4 Mount the two rack brackets on the front corners of the joined units with the remaining screws.

The brackets can be fitted facing forward or backward.

IMPORTANT When using the WATCHPAX 4 RACK MOUNTING KIT, the two units are attached to the rack with the brackets at the front. The rack must therefore be equipped with a shelf at the back to support the units.
